

HOW TO BUILD A BUG HOTEL IN 4 STEPS

A bug hotel is a refuge for solitary bees and other bugs. You can use anything to make one. Old bamboo canes or blocks of wood with holes drilled into them make great places for insects to nest.

#1

WHERE TO BUILD IT

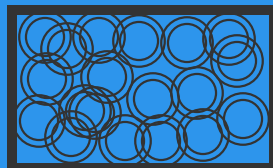

Many invertebrates like cool damp conditions so siting your habitat under a tree or hedge in semi shade will be perfect.

#2

THE STRUCTURE

This can be as simple as a wooden box with straws in it. The rule for success is to make sure there are as many tubes and holes as possible for the creatures to crawl in.

#3

SIT BACK AND WATCH

Bugs and bees will be attracted almost immediately, so sit back and see what you get!
